

INDEX

- Acute myocardial infarction, 270, 278
- Adhesion, 10, 54
- Adhesive interactions, 159, 162
- Adult skeletal myoblast cells, 267
- Adult stem cells, 32
- Agarose, 184, 186
- Alginate, 184, 186, 192
- Allografts, 220
- Anisotropic, 53
- Antithrombogenic nanofibers, 244
- Arrhythmias, 267, 273
- Atomic force microscopy, 171
- Atrial natriuretic factor, 265
- Autografts, 220
- Axisymmetric flow-focusing devices, 185

- Bioactive factors, 2, 8
- Bioactive materials, 81
- Biocompatibility, 7, 81, 104
- Biodegradability, 89
- Biodegradable nanofiber, 120
- Bioinert, 81
- Biological gradients, 58
- Biological properties, 54, 204

- Biomaterials, 6
- Biomimetic, 123, 210
- Biomimetic, 123, 210
- Biomimetic, 123, 210
- Biomineral, 203, 210
- Bioprinting, 149
- Bioresorbable materials, 81
- Blood vessels, 236
- Bone, 142
- Bone marrow, 269
- Bone marrow stem cells, 269
- Bone regeneration, 163
- Bone tissue engineering, 143
- Bottom up approach, 147
- Brain disease, 281

- Cadherins, 165
- Calcium phosphate, 85, 98
- Carbodiimide, 126
- Cardiac, 261
- Cardiac muscle, 261, 262
- Cardiogenesis, 262
- Cardiomyocytes, 262, 263
- Cardiomyogenic, 265
- Cartilage, 6, 52
- Cell adhesion, 10, 11, 14

- Cell-adhesive nanofibers, 245
Cell attachment, 7, 10, 16
Cell-laden hydrogel, 192
Cell lineages, 131
Cell migration, 55, 56, 59
Cell positioning, 69
Cell sheets, 194
Cell therapy, 5
Cell tracking, 9
Cell transplantation, 191
Cells, 2, 159
Cell-scaffold interaction, 30
Ceramic, 80, 90
Chemical gradients, 57
Chemotherapy, 29
Chitosan, 124
Chondrogenesis, 42
Clonogenic assays, 275
Coagulation, 244
Coaxial electrospinning, 19
Collagen, 121, 122
Compression modulus, 221
Compression strength, 221
Controlled assembly, 196
Coronary artery, 261, 276
Cross-linking, 125
Cytoskeleton, 160
- Dacron, 237
3D cell structures, 184, 196
3D co-culture, 194
Delivery vehicles, 205, 207
Directed assembly, 211
Drug delivery, 163, 175
3D scaffold, 133
- ECM proteins, 163, 168
Elastin, 242
Elastomeric, 126
Electrospinning, 14
Electrospraying, 129
Electrospun scaffolds, 132
Embryonic stem cells, 4
Emulsification, 62
Encapsulation, 191, 193
Endothelium, 237, 244
Engraftment, 6, 9
Extracellular matrix, 28
- Fibers, 187
Fibrous scaffolds, 12
Filler, 222
Flow lithography, 187, 196
Flow systems, 173
Focal adhesions, 162
Freeze casting, 94, 104
Functional group, 288
Fusion, 287
- Gas foaming, 61
Genipin, 126
Gradient biomaterials, 52
Growth factors, 17
- Hematopoietic stem cells, 269
High-pressure processing, 95
Homing, 266, 278, 283
HUVECs, 238
Hydrocarbon templating, 95
Hydrodynamic microarray, 189
Hydrodynamic shear stress, 173
Hydrogel, 183
Hydrogel beads, 185
Hydrogel blocks, 187
Hydrogel fibers, 187
Hydrogels, 183
Hydroxyapatite, 82, 85, 221
- Immunoglobulin, 165
Immunomodulatory, 276
Implants, 6
Induced pluripotent stem cells, 268
Injectable, 203, 207
Inkjet printing, 69
Integrins, 160
Interconnectivity, 144, 146
Interface tissue engineering, 52
Interface tissues, 52
Ischemic heart disease, 261
- Lamination, 148
Laminin, 160, 163
Left ventricular devices
Lithography, 246
Lyophilization, 62
Lyophilizing, 222

- Matrix, 237
- Mechanical properties, 144
- Mechanical strength, 145
- Mechanical support, 237
- Membrane lamination, 95
- Mesenchymal stem cells, 6, 33
- Micro, 236
- Microcontact printing, 66
- Microencapsulation, 206
- Microenvironment, 92
- Microfluidic devices, 189
- Microfluidic handling, 189
- Microfluidics, 246
- Micromanipulation, 171
- Micromolding, 187
- Micropatterning, 248
- Micropores, 91, 101
- Microreactors, 209
- Microspheres, 202
- Microvascular networks, 246
- Migration, 8
- Moldable formulations, 212
- Multifunctional tissue, 131
- Multilayering electrospinning, 31
- Multipotent, 269
- Myoblasts, 267
- Myocardial infarction, 267, 280
- Myocardial regeneration, 283
- Myocardial repair, 273, 287

- Nanocomposites, 221
- Nanofiber gels, 251
- Nanofiber scaffolds, 15, 17
- Nanofiber technology, 27
- Nanofibrous meshes, 30
- Nanoimprint lithography, 68
- Nanopatterning, 169
- Nanoscaffolds, 11
- Nanospheres, 202
- Nanotechnology, 1
- Nanotopography, 10, 238
- Natural polymeric scaffolds, 122
- Neural, 43
- Neurons, 132

- Oligopotent, 275
- Organ transplantation, 2
- Osseointegration, 84, 91, 119
- Osteoblastic, 132
- Osteoconductive, 123
- Osteogenic, 132

- Particulate leaching, 222
- Patterning, 64
- PDMS, 64, 65
- Phase separation, 61
- Photolithography, 63, 68, 148
- pH responsive, 127
- Physical gradients, 54
- Physical patterning, 32
- Plasticity, 271, 288
- PLGA, 222, 225
- Pluripotent, 34
- Poly(ethylene glycol) 167, 184
- Polyesters, 167
- Polymer nanocomposites, 221, 225
- Polymeric materials, 29
- Polymers, 204
- Polytetrafluoroethylene, 237
- Pore size, 56
- Porogens, 203, 207, 212
- Porosity, 56, 119
- Printing, 198
- Processing techniques, 148
- Programmed delivery, 206
- Proliferation, 5, 8, 10, 56

- Random assembly, 196
- Rapid prototyping, 93
- Regeneration, 142, 220
- Regenerative medicine, 1, 120, 131
- Replication technique, 94
- RGD, 10, 163, 231
- RGD peptide, 231
- RGD tripeptide, 163

- Salt leaching, 60
- Scaffolds, 1, 16, 18, 28, 30
- Self-assembled monolayers, 58
- Self-assembly, 12
- Self-renewal, 32, 34
- Signaling molecules, 245
- Silk, 227, 228
- Silk fibroin, 124
- Skin regeneration, 36, 38
- Slip casting, 94, 96
- Solvent-casting, 146
- Spinneret, 30, 31

- Stem cells, 3, 263
- Stiffness, 54, 57, 68
- Surface topography, 120, 124
- Sustained delivery, 212
- Synthetic polymer scaffolds, 14
- Synthetic scaffolds, 14

- Tendon, 52, 55, 67
- Thermo-responsive, 128
- Three-dimensional, 32
- Thrombosis, 237
- Tissue engineering, 1, 28, 142,
- Tissue ingrowth, 56
- Tissue regeneration, 119, 125, 142

- Top down approach, 142, 144
- Topography, 163, 170
- Totipotent, 265, 275
- Transcription factors, 265
- Transdifferentiation, 270
- Transplantation, 131, 134, 191, 262, 268
- Troponin, 265

- Vascular grafts, 81, 236, 237
- Vascular tissue engineering, 246
- Vascularization, 247, 251
- Ventricular perforation, 278

- Wound repair, 48
