

## SUBJECT INDEX

- Academic education, 126–140
- Acceleration shock, environmental health hazards, 555–556. *See also* Shock
- Acceptance, HSI requirements, 174–177
- Accident(s):  
and time of day, 717, 726  
defined, 499  
examples, 1–2, 334, 343, 717, 732, 795, 798, 802
- Accident and incident analysis, human factors engineering (HFE), 470–471
- Accreditation, 250, 275
- Acoustic energy:  
assessment expertise, 576  
environmental health hazards, 545–547  
tools and techniques, 561–563
- Acquisition. *See* Simulation-based acquisition; Systems acquisition culture; Systems acquisition interfaces; U.S. Army systems acquisition
- Adaptive learning model, 799–800
- Adaptive performance (information systems design):  
guidelines and tools, 813–814, 817–819  
human performance concepts, 805–807
- Advanced concept technology demonstrations (ACTDs), 110
- Advanced forward artillery system (AFAS), 675
- Advanced rotocraft technology integration (ARTI) program, 678
- Advanced tactical architecture for combat knowledge system (ATACKS), 812, 815–816
- Advanced technology demonstrations (ATDs), 110
- Affordability:  
analysis, 633  
system, 403  
training, 829, 830
- Air Force System Safety Handbook*, 506
- Air traffic control, 9, 861–875  
goals, 862–864  
HFI example, 871–873  
HFI in, 864–870  
automation issues, 868–869  
center TRACON system, 864–865  
HFI issues, 866–867  
implementation, 866  
results assessed, 869–870  
integration of systems, 870–871  
overview, 861–862
- Alarms, display design, human system interfaces, 728
- Altitude sickness:  
assessment expertise, 578  
environmental health hazards, 550–551  
tools and techniques, 567–568
- Ambient lighting, display design, human system interfaces, 726–727
- Ambient pressure change:  
environmental health hazards, 550–551  
tools and techniques, 568–569
- American Association for Automotive Medicine, 625
- American Conference of Governmental Industrial Hygienists (ACGIH), 552, 559
- American Industrial Hygiene Association (AIHA), 545, 559, 565
- American National Standards Institute (ANSI), 282, 474
- American with Disabilities Act of 1990, 82
- American Society of Naval Engineers (ASNE), 161
- Anthropometrics:  
human factors engineering (HFE), 471–472, 485, 487–488  
human system characteristics and measures, 703–705  
workspace design, human system interfaces, 724–726
- Apache Longbow program, 644, 665, 684–685, 689–690
- Applicability, HSI, sociotechnical systems complexity, 9–11
- Application process, systems acquisition culture, 68–71
- Aptitude, trade-offs, 397
- Aptitude testing, personnel domain, 390–391, 393

- Armored gun system, 664, 665, 666, 667, 676, 677
- Armed Forces Qualification Test (AFQT), 391
- Armed Services Vocational Aptitude Battery (ASVAB), 391, 402, 684, 734
- Army Logistics Management College (ALMC), 148, 149
- Army systems acquisition. *See* U.S. Army systems acquisition
- Attack probability reduction, personnel survivability, 607–609
- Attention management, shipboard systems and operations, human support task requirements, 756
- Atomic components of thought-rational (ACT-R), 417, 418, 477, 479
- Audio engineers, new systems training tool, 855
- Audition, sensation and perception, 706–707
- Auditory display design, human system interfaces, 728–729
- Augmented reality (AR), education and training (ET), 133, 136
- Australian Defense Sciences Technology Organization, 480
- Automation:
  - abuse of, information systems design, 803–804
  - information systems design, guidelines and tools, 814–815
  - manpower, personnel, and training (MPT), 419–422
  - training challenge, 453–454
- Automobile engine, new product development, 894
- Background stressors, human system characteristics and measures, 721
- Bail-out ejection, personnel survivability, 615–616
- Balance:
  - HSI system requirements, 180
  - sensation and perception, 707–708, 709
- Ballistics protection, damage reduction, 609–610
- Behavioral model, organizational change, 34
- Bhopal, India accident, 1, 717
- Bias:
  - information systems design, human performance concepts, 808–809
  - sensation and perception, 705–708
- Bill payer identification, manpower domain, 384
- Biochemical analysis, human factors engineering (HFE), 471–472
- Biological hazards:
  - assessment expertise, 576
  - environmental health hazards, 547–548
  - tools and techniques, 563–565
- Bioterrorism, national security, 916–917, 918
- Black Hawk helicopter accident, 334, 343
- Black-Scholes values, 637
- Blast overpressure, environmental health hazards, 546–547
- Blunt shock, environmental health hazards, 556. *See also* Shock
- Board of Certified Professional Ergonomists (BCPE), 133, 159, 735
- Body armor, personnel survivability, 618–619
- Body temperature:
  - cold stress:
    - assessment expertise, 578
    - environmental health hazards, 558
    - tools and techniques, 573–574
  - heat stress:
    - assessment expertise, 578
    - environmental health hazards, 556–558
    - tools and techniques, 572–573
  - human system characteristics and measures, 716–717
- Bureaucracy, reductionist thinking, 34
- Business environment, systems acquisition culture, 66–68
- Business process reengineering (BPR), 381–382
- Camouflage, 834
- Canada's Defence and Civil Institute for Environmental Medicine (DCIEM), 410, 411
- Canada, manpower, personnel, and training (MPT), 410
- Capability maturity concept, 177
- Capability requirement, HSI requirements, 171–172
- Career potential, human systems integration (HSI), 149–157
- Casualty assessment tools, 624–626
  - limitations of, 626
  - ORCA model, 624–625
  - weapons systems effects models, 626
- Cause-consequence analysis, system safety, 524–525
- Cautions, display design, human system interfaces, 728
- CC-SART technique, 476
- Certification, education and training (ET), 154–157, 159. *See also* Testing and certification
- Challenger* accident, 1
- Change:
  - guidance of, transformational change model, 45–49
  - support of, transformational change model, 49–54
  - sustainment of, transformational change

- model, 54–58
- Change agenda, initial message and, transformational change model, 42–43
- Checklists, human factors engineering (HFE), 475
- Chemical hazards:
  - assessment expertise, 576–577
  - environmental health hazards, 548–549
  - tools and techniques, 565–567
- Chernobyl, USSR accident, 1, 717
- Circadian rhythms, human system characteristics and measures, 716–719
- Civilian American and European Surface Anthropometry Resource (CAESAR), 471
- Clearly understood need, HSI system requirements, 179
- Code of Hammurabi, 498
- Cognition:
  - human system characteristics and measures, 708–710
  - systems acquisition culture, 81–82
- Cognition as a network of tasks (COGNET), 417, 477
- Cognitive decision task, user-centered systems engineering, 329–335
- Cognitive engineering, information systems design, 797–798
- Cognitive modeling, manpower, personnel, and training (MPT) integration tools, 417
- Cognitive process models, human factors engineering (HFE), 477
- Cognitive style, human system characteristics and measures, 710, 711
- Cognitive systems engineering, user-centered systems engineering, 298
- Cognitive task analysis (CTA): 243, 450, 811
  - air traffic control, 866–867
  - human factors engineering (HFE), 469–470
  - information systems design, guidelines and tools, 811
- Cognitive task characteristic, task model relationship to, user-centered systems engineering, 335–338
- Cognitive-task requirements (CTRs), user-centered systems engineering, 306–307
- Cold stress:
  - assessment expertise, 578
  - environmental health hazards, 558
  - tools and techniques, 573–574
- Cold War, 265–266
- Comanche program, army systems acquisition, 49, 678–680, 681–683, 687–688, 688–689, 924–925
- Combat Automation Requirements Testbed (CART), 408, 409, 412–415, 418–419, 479
- Command and control vehicle (C2V), 664, 670, 676, 677
- Comments, HSI system requirements, 179–180
- Commercial applications, manpower, personnel, and training (MPT), 419–424
- Commercial off-the-shelf (COTS) items, 266
  - HSI requirements, 185–189
  - trade-offs, 398
  - trends, 84–85
  - user-centered systems engineering, 357, 359
- Commercial workforce, manpower, personnel, and training (MPT), 381
- Commitment, management, transformational change model, 41–42
- Communication:
  - air traffic control, 867
  - information systems design, human performance concepts, 808–810
  - total, transformational change model, 48
  - transformational change model, 51–52
- Competencies, change support, transformational change model, 49–51
- Complexity, training challenge, 454–455
- Complex multiprocedure systems, HSI system requirements, 181–182
- Complex simulations, human system measurements, modeling and simulation, 251–253
- Complex spaces, experimental design for, human performance measurements, 247–248
- Component advanced development, systems acquisition interfaces, presystems acquisition, 111
- Computer, manpower, personnel, and training (MPT) integration tools, 416–419
- Computer-human interface. *See* Human-computer interface
- Computer systems, trade-offs, 398
- Concept exploration, systems acquisition interfaces, presystems acquisition, 110–111
- Congressional Record-House*, 923
- Continuing education, 152
- Contractor perspective, 201–232
  - documentation, 219–225
  - definitions, 219–220
  - request for proposal, 220–222
  - seller's proposal, 222–224
  - solicitation process summary, 220
  - source selection, 224–225
- overview, 201–202
- procurement stages, 202–219
  - CDR to testing and certification, 216–219
  - contract award to PRR, 205–208
  - generally, 202–205
  - PDR to CDR, 212–216
  - PRR to PRD, 208–212
- program management guidelines, 225–230
- dilemmas in, 228–230

- Contractor perspective (*Continued*)  
 planning, programming, and budgeting, 226–228  
 specifications, 225–226  
 winning strategies, 230
- Cooper-Harper workload scale, 476
- Cost-benefit analysis, 631–657  
 army systems acquisition, 688–690, 697  
 examples, 645–655  
 applications, 646–654  
 distributed mission training, 645–646  
 predictive toxicology, 646  
 visually coupled targeting and acquisition system (VCATS), 645  
 frameworks, 633–641  
 comparisons between, 639–641  
 knowledge capital approach, 638–639  
 multiattribute utility models, 634–636  
 option-pricing theory, 636–638  
 traditional economic analysis, 634  
 human system measurements, 238  
 interactive media instruction (IMI), 842–845  
 methods, 641–644, 646–654  
 overview, 631–633
- Cost-benefit ratio (CBR), cost-benefit analysis, 634
- Costs:  
 education, 912  
 health care, 907  
 life cycle, 107, 108  
 manpower and personnel, 107  
 manpower, personnel, and training (MPT), 37  
 national security, 915  
 training, 107, 842–845
- Crew size, manpower domain, 385, 433, 439, 744
- Critical design review (CDR):  
 from preliminary design review (PDR), procurement stages, contractor perspective, 212–216  
 to testing and certification, procurement stages, contractor perspective, 216–219
- Critical operational issues and requirements (COICs), 117
- Cross-cultural issues, systems acquisition culture, 82–83
- Crusader program, army systems acquisition, 664, 674, 680–681, 683–684
- Cultural change, training, 455–456
- Culture. *See also* Systems acquisition culture definitions, 63–64  
 leadership, 34–37
- Curricula. *See* Education and training (ET)
- Damage reduction, personnel survivability, 609–613
- Database, new systems training tool, 850–851
- Deceleration shock, environmental health hazards, 555–556. *See also* Shock
- Decision making:  
 human system characteristics and measures, 710, 711  
 human systems integration (HSI), 919  
 information systems design, 797–799  
 guidelines and tools, 811–816, 818  
 human performance concepts, 808–809  
 multi-stage, new product development, 884–885  
 new product development, 891–895  
 shipboard systems and operations, human support task requirements, 756–760
- Decision modeling, manpower, personnel, and training (MPT) integration tools, 418
- Decision task, user-centered systems engineering, 329–335
- Decision to change, transformational change model, 39–45
- Decompression sickness, environmental health hazards, 551
- Deep-sea diving, personnel survivability, 620–621
- Defence Researchers Development Canada, 259
- Deployment, systems acquisition, 116–117
- Deputy Chief of Staff for Personnel (DSCPER), 3, 14
- Design inspection (DI), HSI requirements, 175
- Design reference missions (DRMs), 746
- Design support, systems acquisition, 114
- Detectability reduction, personnel survivability, 604–607
- Deterministic models, human system measurements, modeling and simulation, 249–250
- Developmental testing (DT), 114, 115
- Digital signal processor, new product development, 894
- Directed energy, damage reduction, 610–611
- Direct manipulation interface, user-centered systems engineering, 332
- Discount rate (DR), cost-benefit analysis, 634
- Disease and Nonbattle Injuries (NDBIs), 543
- Display design:  
 human system interfaces, 726–729  
 information systems design, 816
- Display legibility, HSI requirements, 176–177
- Distributed mission training, cost-benefit analysis, 645–646
- Documentation:  
 contractor perspective:  
 definitions, 219–220  
 request for proposal, 220–222  
 seller's proposal, 222–224  
 solicitation process summary, 220  
 source selection, 224–225  
 human factors engineering (HFE), 486

- integration of:
  - army systems acquisition, 670–671
  - HSI principles, 15, 670, 789
- Domains, list of
  - HSI, 126, 145
  - MANPRINT, 3
- Domain interactions, human system
  - measurements, 253–258
- Double-integration process, human systems
  - integration (HSI), 8–9
- Downsizing, training, 451–453, 455, 457–458
- Dynamic task requirements, shipboard systems
  - and operations, 762–769. *See also* Shipboard systems and operations
  
- Ear, sensation and perception, 706–707
- Early human factors analysis (EHFA):
  - HSI requirements, risk-based approach, 183–184
  - United Kingdom HFI process, 192–193
- Economic analysis, traditional, cost-benefit analysis, 634
- Education:
  - costs, 912
  - exhibits, 912–913
  - HSI applications, 913–915
- Education and training (ET), 121–163. *See also* Manpower, personnel, and training (MPT); Training
  - academic education, 126–140
    - curricula available, 128–132
    - HSI technology, 132
    - hypothetical tracks, 138–140, 141–144
    - recommended courses, 134–138
    - shortcomings in, 134
    - trends in, 132–133
  - army systems acquisition, 676–677
  - career potential, 149–157
  - competencies required, 122–126
    - core requirements, 124, 126, 128
    - levels in, 123–124, 125
  - HSI principle, 17
  - HSI principle application, 20
  - overview, 121–122
  - personnel supply, 157–160
  - systems acquisition culture, 77–78
  - textbooks, 140, 142, 144–147
  - training courses, 147–149
- Effectiveness measurements, human system
  - measurements, 235–236
- Egypt Air flight 990, 1
- Ejection, bail-out, personnel survivability, 615–616
- Electromagnetic environmental effects,
  - personnel survivability, 613
- Electronic Industries Association (EIA), 282
  
- Electronic warfare, attack probability reduction, 608–609
- Emergent properties, HSI system requirements,
  - hierarchical structures, 178
- Environmental health hazards, 541–593
  - analysis process, 579–581
  - assessment expertise, 576–578
  - assessment process tools, 581–584
    - exposure control hierarchy, 582–583
    - hazard tracking database, 583–584
    - medical cost avoidance model, 583
    - risk assessment, 581–582
- categories, 545–561
  - acoustic energy, 545–547
  - ambient pressure change, 550–551
  - biological substances, 547–548
  - chemical substances, 548–549
  - cold stress, 558
  - heat stress, 556–558
  - oxygen deficiency, 549–550
  - radiation energy, 551–555
  - shock, 555–556
  - trauma, 558–560
  - vibration, 560–561
- overview, 541–542
- tools and techniques, 561–576
  - acoustic energy, 561–563
  - ambient pressure change, 568–569
  - biological hazards, 563–565
  - chemical hazards, 565–567
  - cold stress, 573–574
  - heat stress, 572–573
  - oxygen deficiency, 567–568
  - radiation energy, 569–571
  - shock, 571–572
  - trauma, 574–575
  - vibration, 575–576
- U.S. Army Health Hazard Assessment (HHA)
  - program, 542–545
- Environmental Protection Agency (EPA), 541
- Environmental stressors, human system
  - characteristics and measures, 720–721
- Equipment requirements, task-focused
  - requirements compared, HSI requirements, 173
- Ergonomics. *See also* Human factors
  - engineering (HFE)
    - defined, 463, 559
  - education and training (ET), 132–133, 134, 136, 137–138
  - shipboard systems and operations, human
    - support task requirements, 762
  - user ergonomics, task-centered design, 784
- Errors:
  - air traffic control, 868
  - human factors engineering (HFE), 487–491
- Evacuation, of wounded, personnel survivability, 617–618

- Evaluation. *See* Test and evaluation (T&E)
- Event tree analysis, system safety, 515, 517
- Evolutionary acquisition, simulation-based acquisition, 267–269
- Experimentation, human performance measurements, 246–248
- Exposure:  
   defined, 499  
   risk analysis, 503
- Exposure control hierarchy, environmental health hazards assessment, 582–583
- External constituencies, transformational change model, 43–45
- Eye, sensation and perception, 705–706
- Failure modes and events analysis (FMEA), system safety methods, 517, 519, 520–521
- Family of medium tactical vehicles (FMTV), 664, 665, 670, 676, 677
- Fatigue:  
   human system characteristics and measures, 716–719  
   reduction of, personnel survivability, 619–622
- Fault hazard analysis, system safety, 519, 522, 523
- Fault tree analysis, system safety, 517–519
- Federal Acquisition Regulation, (FAR). *See* Regulations
- Federal Aviation Administration (FAA), 9, 24, 65, 501, 861. *See also* Air traffic control F-18 Hornet aircraft, 254–256
- Field studies, human factors engineering (HFE), 472
- Fire, *USS Forrestal*, 613
- Fire extinguisher, personnel survivability, 623–624
- Fire suppression, personnel survivability, 616–617
- Food and Drug Administration (FDA), 541, 555, 927
- Forward area resupply vehicle (FARV), 675, 683, 684
- Fox vehicle program, 685–687, 690
- Fratricide:  
   information systems design, 814  
   personnel survivability domain, 596, 601–604
- Friendly fire, 795
- Frostbite:  
   environmental health hazards, 558  
   tools and techniques, 573–574
- Functional demonstration (FD), HSI requirements, 175
- Function allocation, human factors engineering (HFE), 469–470
- Future combat system (FCS), 419, 816
- Gas masks, personnel survivability, 618–619
- Government workforce, manpower, personnel, and training (MPT), 380–381
- Graphical human models, human factors engineering (HFE), 477–478
- Graphic design, new systems training tool, 853–855
- Guidance, of change, transformational change model, 45–49
- Guidelines, human factors engineering (HFE), 474–475
- Gustation, sensation and perception, 708, 709
- Habitability, 726
- Hammurabi Code, 498
- Hand-transmitted vibration:  
   environmental health hazards, 560  
   tools and techniques, 575–576  
   haptic sense (touch):  
     display design, 729  
     sensation and perception, 707
- HARDMAN:  
   army system acquisition, 672–673, 675, 683, 686–687  
   human system measurements, modeling and simulation, 250  
   manpower, personnel, and training (MPT), 400
- Hazard(s), defined, 499. *See also* Environmental health hazards
- Hazard analysis, preliminary, system safety, 515, 516
- Hazard identification, system safety, 528–532
- Hazard probability:  
   defined, 499  
   risk analysis, 503
- Hazard severity:  
   defined, 499  
   risk analysis, 503
- Hazard tracking database, environmental health hazards assessment, 583–584
- Head up display, situation awareness, 722–723
- Health and safety, education and training (ET), 137
- Health care:  
   costs, 907  
   exhibits, 908–910  
   HSI applications, 910–912  
   manpower, personnel, and training (MPT), 422–424
- Health hazards. *See* Environmental health hazards
- Heat stress:  
   assessment expertise, 578  
   environmental health hazards, 556–558  
   tools and techniques, 572–573

- Helmets, personnel survivability, 618–619
- Heuristic evaluation, user-centered systems engineering, 353–354
- Hierarchical structures, HSI system requirements, 178–179
- High drivers:  
manpower domain, 383–384  
personnel domain, 388–389  
training domain, 394
- High-level task description, system requirement document (SRD), UK HFI process, 196–197
- Hit avoidance, attack probability reduction, 608
- Homeostasis, human system characteristics and measures, 712
- Human behavior representation (HBR), human factors engineering (HFE), 479
- Human-centered design. *See also* Shipboard systems and operations  
army systems acquisition, 666–667  
HSI principle, 14  
HSI principle application, 19
